## Turbine Oil Conditioning Systems

### ELEMENTS

The Kaydon TURBO-TOC® system is a high-performance turbine oil conditioning platform designed to continuously remove particulate and water contamination from lubricating oil. Utilizing coalescing and particulate filtration technologies, TURBO-TOC® enhances turbine reliability, extends oil life, and supports long-term equipment performance during both operation and shutdown.

#### **TURBO-TOC® Particulate Elements**

TURBO-TOC® particulate filters are engineered to remove fine solid contaminants from turbine oil systems with high efficiency. These filters support aggressive ISO Cleanliness Code targets and protect sensitive bearing surfaces, enabling extended oil service intervals and reduced unplanned maintenance.

#### **TURBO-TOC® Coalescer and Separator Elements**

The coalescer and separator elements in the TURBO-TOC® system work together to remove free and emulsified water from turbine oil without chemicals or heat. The coalescer aggregates dispersed water into large droplets, while the separator blocks re-entry into the system—keeping oil dry, equipment protected, and startups reliable.
